

Technical Research Workshop

Darwin Convention Centre, 1st May 2012

Technology - Sharing and Education

Radiation therapists, medical physicists and other delegates with an interest in fostering multi-disciplinary participation in radiotherapy clinical research are invited to attend this one day workshop prior to the TROG Annual Meeting. The workshop will focus on new technologies and quality assurance in clinical trials and on practical ways you can get involved in the TROG research program.

In addition to new technology, this year's focus will be to promote interaction, sharing and mentoring with plenty of opportunities for Q & A. We encourage you to provide your input prior to the meeting on areas you would like covered.

Guest Speaker: Prof Dale Bailey, The University of Sydney/Royal North Shore Hospital, will be talking about PET and CT imaging.
